

HEXPLORE

Finding new connections from your everyday life.

How it works

Hexplore is a new and innovative way to find new friends. Based on bluetooth and GPS. You start the app by signing in with your Facebook profile. After that the app starts connecting you to other users based on location. Everytime you are in the same place as another user, the app will do a handshake between you two. When you get enough handshakes, you can see each others profiles and become friends in Facebook.
